**DETAILED ACTION*****Response to Arguments***

Applicant argues that AAPA (figure 34) does not disclose all the limitations of claim 31, wherein the arrangement of the power lines of Iranmanesh et al. and Chinese patent (CN1239355A) is in a different order than that which recited. For example, in Iranmanesh et al., not only the arrangement of the power supply lines and transistors is different than that which is recited, but the control method of transistor 70 switching VSS(1) and VDD, and transistor 125 switching between VDD and VSS(2) cannot be obtained.

The examiner agrees that AAPA (figure 34) does not disclose all the limitations recited in claim 31. AAPA does not teach placing the first and second transistors in the gap between said second and third power supply lines. Iranmanesh et al. and Chinese patent (CN1239355A) teach placing first and second transistors in a gap between second and third power supply lines. Therefore, the combination of AAPA with Iranmanesh et al. and Chinese patent (CN1239355A) teach all the limitations recited in claim 31.

Although claim 31 recites placing the first and second transistors in the gap between said second and third power supply lines, wherein said first transistor switches between said first and second powers supply lines and said second transistor switches between said second and third powers supply lines, these limitations do not necessarily provide limitations as to the structural relationship between the recited elements. These limitations were considered as merely reciting the relative physical location of the

elements, as viewed from above. Recitation of structural connections between the elements may differentiate the claimed invention from the recited prior art.
